Dear Hiring Manager,

As a **Computer Science graduate from The University of Texas at Arlington** with hands-on experience in full-stack development, user-centric design, and peer communication, I bring a unique blend of technical expertise and customer focus—ideal for roles in software development and technology business. My goal is to build and promote solutions that make people's lives convenient and lead in spaces where innovation, strategy, and customer needs align.

In University as a **Web Developer for UTA's CSE Department**, I contributed to scalable applications using modern frameworks like React, Django, and Node.js. My work extended beyond code—I implemented secure authentication systems, optimized data pipelines, and designed UI components that enhanced user experience. These technical foundations are complemented by my work as a **TRIO Peer Educator and Resident Assistant**, where I developed strong interpersonal, presentation, and problem-solving skills—essential for success in client-facing roles. **Across academic projects and hackathons**, I've led initiatives that turned complex user needs into intuitive products—from healthcare data visualizations to Android games and GIS-based mapping tools. Whether building APIs or explaining tech value to non-technical users, I thrive at the intersection of technology, engineering, and communication. Always on a deliberate, ongoing process of building, testing, refining, and innovating with purpose.

Continuous learning for me isn't just a habit—it's my competitive edge. I actively explore emerging technologies, build experimental side projects, and contribute to open-source initiatives to stay ahead of the curve. Lately, I've been immersing myself in agentic AI systems to position myself at the forefront of the AI wave and integrate intelligent, autonomous features into my applications.

I would welcome the opportunity to bring this hybrid perspective to your team—as a developer, technical consultant, or technology business professional. Thank you for considering my application.

For Virtual, On Phone, or In-Person interviews or discussions please reach out to me via email first for me to share contact details(phone number) and schedule date, time, and/or location. You can also schedule Google Meets sessions via the Calendly Link included on my Linkedin profile's contact info.

Sincerely,

Mubtasim Ahmed Rakheen
